Myrosta — Admin Guide

For the rota lead — setting up and running the roster.

As admin you see everything staff see, plus three extra tabs: **Admin settings, Staff, Audit**. This guide covers the rota-lead workflow end to end. (For the staff-facing basics, see the Staff Guide.)

Signing in

Same as everyone: open **https://myrosta.com.au**, tap **Sign in**, choose **Mobile (SMS)** or **Email**, and type the **6-digit code**. Because your email is set as an admin, you land with the admin tabs available, and you **stay signed in** on your device.

1. First-time setup

Admin settings → **New organisation** (clean slate), then either:

- **Have spreadsheets?** → **Import data** → upload your **roster**, **leave planner** and **EFT** files. Myrosta reads them as-is, pulling in EFT, hours and employee numbers.
- **No spreadsheets?** → follow the **Get started** guide: download the **Staff template**, fill it, upload — Myrosta builds the department for you.

2. Configure the department (Admin settings)

- **Zones** — your clinical areas; set how many are needed each period/day.
- **Minimum & maximum cover** — the floor and ceiling for each day.
- **Extra-slot unlock order** — AM & PM together, AM first, or PM first.
- **Self-roster method** — cohort waves / snake-draft / guarded / auto-draft + adjust.
- **Fixed patterns, 'Any (auto)' zone —** a fixed-pattern day can set a period (AM/PM) and leave the zone as 'Any (auto)'; auto-draft then places it in a balanced free zone, around anyone with a fixed zone, and flags any clashes.
- **Quota period** — how quotas are counted (default per fortnight, to match pay).
- **Uneven quota —** set 'Staff choose' so a consultant whose quota doesn't divide evenly places the extra shift in whichever fortnight suits (still capped at their total).
- **Per-cycle —** cover, zones, self-roster method and quotas apply to the selected cycle only; changing them never alters another (e.g. published) cycle. 'Prepare next cycle' copies the current setup as a starting point.

3. Run a self-roster round

1. Build the base roster — import, or **Self-roster** → **Auto-draft** → **minimum cover** to draft a fair, fully-covered roster in seconds (it skips anyone on leave).
2. **Release for self-roster.** With **cohort waves**, start the waves — they advance automatically as each cohort marks Done.
3. Watch coverage and quotas fill live; **edit any cell** by hand whenever you need.
4. **Schedule it (optional).** On the Self-roster tab, set **Schedule open & close** date-times — Myrosta auto-opens and auto-closes the round, shows a countdown banner, and notifies everyone. (Email/SMS reminders are an optional add-on — see your IT setup.)

4. Approve requests with context

Requests shows each leave/swap with the context to decide: the person's **EFT**, **leave already taken**, **who else is away** those days, and whether you'd **breach the daily cap**. Approve or

decline in a tap — Myrosta updates the roster + leave planner, notifies the person, and drafts the confirmation email.

Unplanned leave (sick days) & locum cover

When a consultant calls in sick, they log **UPL — Unplanned leave** (Requests → Request leave → UPL). **Approving it clears their booked shift**, leaving a visible gap on the roster. If a colleague covers the gap, open that vacant cell in the **Roster** grid, assign them, and tick **Locum cover** — the shift is flagged with an **L** badge on the roster, a **Locum** tag in Daily, and **Locum** in the **payroll export**.

5. Manage staff & access

- **Staff** tab — add/remove people; set rostering mode, EFT/hours, payroll number, an **Alt email** (a personal address for anyone whose hospital blocks external mail — they can sign in with either), and **fixed patterns** (weekly or fortnightly A/B; **Commit (lock)** to fix them — staff changes to a locked pattern come to you for approval).
- **Non-clinical / admin —** set anyone who doesn't work clinical shifts (coordinator, clerk) to this mode to keep them off the roster. Who's rostered and each person's quota/EFT are per-cycle (use '+ Add to this cycle' / 'Remove from this cycle'); a 'Title' field groups people in the RosterOn export.
- **Admin settings** → **Access control** — **Sync allow-list from staff + admins** so your team (by email) can sign in. To grant admin rights, use **Make admin** next to a person (only an existing admin can do this).
- **Shared / ward computers —** at sign-in, staff can tick 'This is a shared computer'; that session won't stay logged in and auto-logs-out after the idle time you set in Access control.

6. Payroll export

When the roster's set, the **Payroll (RosterOn)** button exports every shift in one click — correct times (AM, PM, on-call, CST) and leave pro-rated by EFT, with no re-keying. Upload your RosterOn import template so the columns map automatically, and choose the date format.

Export for RosterOn — the 'RosterOn sheet' button builds a two-sheet workbook: a readable roster grouped by Title (matching RosterOn's cell format, including overnight OC) plus a clean one-row-per-shift data sheet. All export buttons are admin-only.

7. Publish, back up, audit

- **Roster status** → **Publish** when the cycle is ready.
- Backups are automatic — the cloud database keeps continuous point-in-time backups, so there's nothing to download or restore by hand.
- **Audit** logs every approval and change — nothing happens off the record.

Good practice

- Set zones, cover and the self-roster method **before** releasing a round.
- **Auto-draft to minimum cover first**, eyeball it, then release for self-roster.
- Keep each consultant's **personal email / mobile filled in** (Staff tab) and **Sync the allow-list** before inviting people — that's how sign-in and reminders reach them. (Work emails and payroll numbers are hidden by default for privacy.)
- Reach for the **Audit** log if anyone ever queries a change.
